PROFESSIONAL SUMMARY

Senior Frontend Engineer with **7+ years of experience** owning end-to-end frontend development and UI design across **enterprise SaaS platforms, AI-powered products, and high-traffic web applications**. Currently building **Goalytics** – an AI-powered OKR platform – at Digital Gravity, implementing real-time collaborative sessions via Socket.io, Claude-powered AI suggestion workflows, and role-based dashboards. Expert hand-coder of **HTML5, CSS3/SCSS, Bootstrap** and pixel-perfect React.js interfaces translated directly from Figma – without over-reliance on component libraries. Proven track record maintaining **design systems, reusable component libraries**, and consistent UI across SaaS product and marketing surfaces. Daily practitioner of **AI-assisted development workflows** (Claude, GitHub Copilot, Cursor) with strong judgment in validating, refining, and taking full ownership of AI-assisted outputs. Experienced in Agile/Scrum, clean W3C-standard code, accessibility (WCAG-aligned), and collaborating with product, engineering, and marketing stakeholders to ship polished, user-centric digital experiences.

TECHNICAL SKILLS

Core Frontend: HTML5, CSS3/SCSS, Bootstrap (expert hand-coded, W3C-standard – no over-reliance on component libraries)

Frameworks: React.js, Next.js, Vue.js, Angular

Real-Time & Collaboration: Socket.io, WebSockets – multi-user collaborative sessions, live presence, real-time data sync

AI-Integrated UI: Claude API workflows, AI-powered suggestion interfaces, AI output validation & ownership

UI/UX & Design: Figma (design-to-code), wireframes, mockups, prototypes; design system ownership; visual design instincts

Design Systems: Reusable component libraries, Tailwind CSS, ShadCN UI, Bootstrap, consistent cross-surface UI standards

Accessibility: WCAG-aligned practices, semantic HTML, keyboard navigation, focus management; Section 508 awareness

Responsive Design: Mobile-first, fluid layouts, flexible CSS architecture; RTL/multilingual layout awareness

Enterprise SaaS: Multi-step workflow UIs, admin dashboards, analytics interfaces, role-based access control UI

API Integration: REST APIs, GraphQL, WebSockets, Socket.io

State Management: Redux Toolkit, Zustand, Context API

Performance Optimisation: Lighthouse Audits, Core Web Vitals, Lazy Loading, Code Splitting, SSR/SSG, CDN

Build Tools & DevOps: Webpack, Vite, Git, GitHub Actions, Docker, Vercel, AWS, Netlify

Testing: Jest, React Testing Library, TDD

AI-Assisted Workflow: Claude, GitHub Copilot, Cursor, Bolt – daily use with rigorous output validation and ownership

Methodologies: Agile/Scrum, Code Reviews, Mentoring, Cross-Functional Collaboration

WORK EXPERIENCE

Lead Frontend Developer – Goalytics (AI OKR Platform)

July 2025 – Present

Digital Gravity – Onsite

Karachi, Pakistan

- Building **Goalytics** (goalytics.io), an AI-powered OKR platform – designing and implementing pixel-perfect UI from Figma specifications in **React.js**, shipping hand-coded **HTML5/CSS3/SCSS** to W3C standards.
- Implemented **real-time multi-user collaborative sessions** using **Socket.io** – live goal brainstorming, simultaneous editing, voting, commenting, and live presence indicators across all session participants simultaneously.
- Integrated **Claude AI API workflows** for AI-powered goal generation, objective structuring, key result proposals, weightage balancing recommendations, and dashboard insights – adapting an AI-first development workflow throughout.
- Built **AI-assisted suggestion interfaces**: surfaces Claude-generated OKR suggestions in real time during sessions, with UI for participants to review, accept, modify, or reject AI-generated content – embodying strong AI output validation and user accountability principles.
- Developed **role-based UI architecture** (Admin, Manager, Participant, Viewer) with precisely scoped permission states, session control flows, and collaborative workspace interfaces.
- Built **multi-step onboarding flows**, live session dashboards, goal-tracking interfaces, snapshot comparison views, and PDF export functionality – all responsive and cross-browser compatible.

- Integrated REST APIs across **authentication, data submission, session management**, and progress tracking workflows; collaborated closely with backend engineers on API contracts.

Senior Frontend Engineer (Frontend Lead)

March 2021 – June 2025

Disrupt.com (Vettio) – Onsite

Karachi, Pakistan

- **Owned the Frontend of a production enterprise SaaS platform** end-to-end – from Figma wireframes and design system standards through to hand-coded, pixel-perfect React.js implementation – keeping experience consistent across all product touchpoints.
- **Hand-coded pixel-perfect HTML5/CSS3/SCSS** and shipped it in React.js and Next.js, maintaining clean, W3C-standard, accessible markup without over-relying on third-party component libraries.
- **Turned requirements from product, engineering, and design stakeholders** into wireframes, mockups, and prototypes in Figma, then implemented them with full fidelity in production.
- **Built and maintained a design system and shared component library**, ensuring UI consistency across SaaS product surfaces and marketing-adjacent landing pages – reducing delivery time by **40%**.
- Implemented **WCAG-aligned accessibility practices** – semantic HTML, keyboard navigation, focus management, and colour contrast – ensuring inclusive, standards-compliant interfaces.
- Built **real-time WebSocket-driven features** via LiveKit for live AI voice interview sessions, managing concurrent data streams and complex async UI states.
- **Optimised frontend performance** achieving a 35% improvement in Lighthouse/Core Web Vitals scores via SSR/SSG, lazy loading, code splitting, and CDN integration.
- **Used AI-assisted tools daily** (Claude, GitHub Copilot, Cursor) to accelerate workflows – with rigorous output validation, logic review, and full ownership of final deliverables.
- **Led code reviews**, established frontend engineering standards, and mentored junior developers in Agile/Scrum sprints across product, engineering, and backend stakeholders.
- Maintained **CI/CD pipelines** via GitHub Actions and Vercel; improved deployment reliability by **50%** across staging and production environments.

Front-End Developer

April 2019 – February 2021

Intersys Ltd – Onsite

Karachi, Pakistan

- Built **responsive, accessible web interfaces** using React.js, HTML5, CSS3/SCSS, and Bootstrap – translating Figma and PSD designs into pixel-perfect, cross-browser-compatible production code.
- Maintained **marketing-facing landing pages** alongside product UI; ensured visual consistency and brand alignment across web surfaces.
- Applied **performance optimisation techniques** and migrated legacy WordPress frontend to a modern React.js component architecture.

Front-End Developer

May 2018 – April 2019

Nanosoft

Karachi, Pakistan

- Built responsive, **accessible UI components** for TaskQue using Angular and TypeScript; integrated REST APIs and real-time data feeds with clean, W3C-standard markup in Agile sprint cycles.

UI Developer

March 2017 – April 2018

EFSOL Solution

Karachi, Pakistan

- Designed and developed **responsive marketing websites and landing pages** using hand-coded HTML5, CSS3, and JavaScript; translated Figma/PSD layouts into pixel-perfect, brand-consistent interfaces for design and marketing stakeholders.

KEY PROJECTS

Goalytics – AI-Powered OKR SaaS Platform

- *React.js, Socket.io, Claude AI API, REST API, HTML5/CSS3/SCSS, Figma*
- Full UI ownership of a real-time collaborative AI SaaS platform – multi-user Socket.io sessions, Claude-powered AI suggestion interfaces, role-based dashboards, multi-step onboarding flows, and accessible React.js interfaces shipped from Figma with hand-coded precision. AI output validation and accountability embedded in every AI-facing UI surface.

Vettio – Enterprise SaaS Platform with Design System

- *React.js, Next.js, TypeScript, HTML5/CSS3/SCSS, Figma, WebSockets, REST API*

- End-to-end UI/UX ownership of an enterprise SaaS product – design system stewardship, hand-coded pixel-perfect interfaces, real-time WebSocket features, performance-optimised SSR, and AI-assisted development with full output validation.

Savoyour – High-Traffic Marketing & Product Web Platform

- *Next.js, Vue.js, TypeScript, SCSS, Bootstrap, CDN*
- Owned both product UI and marketing landing pages on a high-traffic consumer platform – SSR-based performance, responsive cross-device design, and brand-consistent UI across all surfaces.

TaskQue – Accessible, Responsive Enterprise SPA

- *Angular, TypeScript, Bootstrap, HTML5/CSS3, REST API*
- Built accessible, cross-browser-compatible enterprise SPA with clean semantic markup, responsive layout, real-time API integration, and role-based UI architecture following W3C and Agile delivery standards.

EDUCATION

Muhammad Ali Jinnah University

Karachi, Pakistan

Master of Science in Computer Science

2020 – 2022

Muhammad Ali Jinnah University

Karachi, Pakistan

Bachelor of Science in Computer Science

2013 – 2017

CERTIFICATIONS

Microsoft MCSA – Windows Server 2012

Franklin Covey Academy – Leadership Certified
